Note: The metallic label on your ATARI 7800 is covered with a protective coating. To remove the plastic, simply peel it off.

Installing the TV/Game Switch Box

Your TV/Game Switch Box allows you to change from television viewing to video game play and back by simply sliding a switch. The switch box is easy to install. Find the picture that looks the most like the back of your TV set and follow those instructions. All you need is a screwdriver.

If Your Television Has Four Screws Only:

- A. Disconnect the twin-lead wire from your television and attach it to the ANTENNA screw terminals on the TV/GAME Switch Box.
- B. Connect the twin-lead wire from the TV/GAME Switch Box to the VHF antenna terminals on your television set.

If you do not have a flat twin-lead antenna wire, you may need to buy an "impedance-matching transformer" (also called a "balun coil"). It is also available at a nominal cost from your local TV and stereo stores.

By attaching a TV/GAME Switch Box to each television in your home, you can easily move your ATARI 7800 ProSystem from room to room. Extra TV/GAME Switch Boxes may be purchased separately.

If Your Television Has a U-Shaped Slider or a Slide Switch:

- A. Move the U-shaped slider to make connection between the two screws. Or, push the slide switch to the side marked "300 ohm" or "300 Ω ."
- B. If you have a round antenna cable:
 - Disconnect the cable from your television.
 - Screw the cable into the impedance-matching transformer.

- Attach the impedance-matching transformer to the ANTENNA screw terminals on the TV/GAME Switch Box. Or if you have a flat twin-lead antenna wire:
- Disconnect it from the television and attach it to the ANTENNA screw terminals on the TV/GAME Switch Box.

- C. Connect the short twin-lead wire from the TV/GAME Switch Box to the VHF antenna terminals on your television set.

Installing the TV/Game Switch Box

If Your Television Has a Short Round Cable:

A. Attach the television's short loose-hanging cable to the connector next to it on your television.

B. If you have a round antenna cable:

- Disconnect the cable from your television.
- Screw the cable into the impedance-matching transformer.

■ Attach the impedance-matching transformer to the ANTENNA screw terminals on the TV/GAME Switch Box. Or, if you have a flat twin-lead antenna wire:

■ Disconnect it from the television and attach it to the ANTENNA screw terminals on the TV/GAME Switch Box.

C. Connect the twin-lead wire from the TV/GAME Switch Box to the VHF antenna terminals on your television set.

If Your Television Is Connected to Cable TV:

Disconnect the Cable TV Antenna from your TV and connect it to the TV/GAME Switch Box using the method appropriate to your application. Once properly connected your TV/GAME Switch Box can remain in your antenna system.

Note: Your Cable TV company may have already supplied you with an impedance-matching transformer.

Plug the Game Cable from the back of your ATARI 7800 Pro-System into the TV/GAME Switch Box at the GAME connector.

The TV/GAME Switch Box can remain attached to your television antenna without bothering your television program reception.

The TV/GAME Switch Box can be attached permanently to the back of your television set.

- Peel off the protective paper on the back of the TV/GAME Switch Box.
- Press the exposed sticky surface onto any clear area on the back of your television, near the antenna terminals.

Setting Up the Console

1. Check the channel selector switch on the back of the console to be sure it is set to the ■ position.
2. Set your television channel selector to Channel 3. If Channel 3 is broadcasting in your area, set the television channel selector switch to Channel 2 and change the channel selector switch on the console to the ● position.

3. Plug the Power Adapter cable jack into the POWER connector at the back of the console.
4. Plug the Power Adapter into any convenient 120-volt AC electrical wall outlet.

Important: Use only the Power Adapter packed with your ATARI 7800. Use of any other power supply could damage the console.

5. Attach TV Connector Cable to console and TV/Game Switch Box.
6. Turn your television set on and set the volume control to a comfortable level.
7. Press the POWER ON/OFF button on the front left side of the console to ON. A red light (LED) glows when the POWER is ON.

8. If your television set has an automatic fine-tuning control, turn it off and manually fine-tune it for the best picture. However, if your television set will not receive color unless the automatic fine-tuning is on, leave it on.

Note: Always turn the POWER OFF when the game is not in use.

Inserting a Game Cartridge

1. Turn the power to the console OFF when inserting or removing a cartridge.
2. Hold the game cartridge so the name on the label faces away from you and the game title reads right-side-up.
3. Insert the game cartridge into the slot at the center of the console. Be sure the cartridge fits firmly in the slot but DO NOT FORCE IT IN.
4. Turn the console POWER ON. An ATARI logo, playfield or title screen will appear on your television set.

Using the 7800 Pro-Line Controllers

The ATARI 7800 ProSystem includes two advanced controllers designed for comfortable and responsive gameplay. These controllers provide eight directions of control. Their function for each game is explained in the manual for the particular game you are playing.

Plug the controllers into the jacks at the front of the console. Use the left jack for one-player games; use both jacks for two-player games. Each jack is designed to fit

the controller only one way. Be sure the connection is firm, but do not try to force it in.

Each controller has two fire buttons. For most games, the right and left fire buttons perform the same functions, and you can use whichever is most comfortable. For more realistic play in some games, however, these buttons are capable of independent functions. Consult your game manual for instructions on how to use the controllers and fire buttons for the particular game you are playing.

To Start Play

After inserting a game cartridge, turn the console POWER ON to view the game title screen and, with most cartridges, to see an example of game play. Press any fire button on the left joystick to start the game at the current game option. To change the current game option while the title screen is up, push the joystick in the direction indicated below or press SELECT on your console to display the menu.

While the menu is displayed, push your joystick in the following directions to change the game options:

- Joystick Right: Increase Difficulty
- Joystick Left: Decrease Difficulty

- Joystick Up: Increase Number of Players

- Joystick Down: Decrease Number of Players

Note: This joystick technique applies to ATARI 7800 ProSystem games and controllers only. For all others, consult the manual for the game you are playing.

Or, press SELECT on the console while the menu is displayed to rotate through the game options.

Press the fire button on your controller or press RESET on the console to start a game with the displayed settings.

During game play, press RESET to start a new game. Press SELECT to display the menu.

Press PAUSE on the console to stop all game action. After 15 to 30 minutes, the screen will go blank to preserve your television. Press PAUSE again to resume game play.

Some ATARI 2600 VCS games use the LEFT and RIGHT DIFFICULTY switches. When a difficulty switch is moved to the left, the game becomes more difficult. Some ATARI game cartridges use these two switches for other functions. Many games don't use them at all.

Returning Your TV Set to Television Program Viewing

- Press the console POWER switch OFF.
- Change the TV/Game Switch on the Switch Box to TV.
- Turn on the automatic fine-tuning if you turned it off.
